

ACCELERATING CLIMATE FINANCE IMPACT TO SUPPORT THE MOMENTUM OF PARIS

As of: August 2019

OBJECTIVE AND ACTIVITIES

The project aims to establish a multi-year platform that measures flows across the climate finance landscape, and conducts in-depth analysis on the role and effectiveness of public and private actors, providing information in an easily accessible manner. The goal is to ensure policymakers and decision-makers, in donor governments, the development finance community and recipient countries, have the knowledge and tools to understand their specific niches in scaling climate finance, identify opportunities to align flows and instruments for maximum impact and scale, and to take advantage of new sources of finance to achieve their climate finance commitments. It will also serve as a platform to connect the dots by mapping main actors' financing activities to ultimately understand how public finance can best be targeted to make the Paris Agreement an enduring success.

STATE OF IMPLEMENTATION/RESULTS

- Global Climate Finance: an update view 2018 has been published providing an update on 2015 and 2016 climate finance flows and referenced in the UNFCCC 2018 Biennial Assessment and Overview of Climate Finance Flows (climatepolicyinitiative.org/...).
- At the website there is an interactive summary (www.climatefinancelandscape.org) and a webinar discussing the results (climatepolicyinitiative.org/...)
- Project outputs were presented at the Climate Finance Day in Paris, France on 28th November 2018.
- High level event of key policy makers, financial intermediaries and institutions engaged in green, low-emissions finance was held on March 21st and 22nd in Venice
