

## CAPACITY BUILDING FOR REDD+ FUNDS TRACKING

As of: May 2021

The project set up a new international online network for tracking financing for reducing emissions from deforestation and forest degradation (REDD+) with at least 15 countries. This is necessary because money flows must be measurable and traceable in order to create a more favourable environment for further REDD+ investments. The network made objective, neutral and reliable information available, and analyses whether REDD+ financing is used effectively. To accomplish this, project partners built an online database to store easily accessible information on REDD+ spending. An annual report summarises the state of REDD+ financing. The new network enables the various stakeholders to use this information for their strategic planning and coordination. These actors can also benefit from related workshops at national level. In this way, the network helps build capacities in the different organisations.

### State of implementation/results

Project completed

- The REDDX project achieved the main goals of tracking finance flows in key REDD+ countries, increasing transparency by allowing stakeholders to better understand what the money was being used for, and generated in-country capacity for government officials and other REDD+ stakeholders to gather and analyse the data themselves.
- The Project created an interactive website data, made the information publically available, generated a series of national and global reports, and disseminated findings to donors, civil society, and other REDD+ stakeholders.
- Capacity building workshops on gaps and needs at national level equally spurred discussions on how REDD+ finance could be more productively allocated or spent to meet key donor and national government objectives.
- REDDX became the go-to source for REDD+

## PROJECT DATA

### Country/Countries:

Demokratische Republik Kongo, Ecuador, Ghana, Guyana, Indonesien, Kolumbien, Liberia, Mexiko, Papua Neuguinea, Tansania, Vietnam

### Implementing organisation:

Forest Trends Association

### Political partner(s):

- Forestry Development Authority (FDA)
- Ministry of Environment, Housing and Territorial Development (MinAmbiente) - Colombia
- Ministry of Environment, Nature Conservation and Tourism (MECNT) - DR Congo
- Ministry of Environment, Science, Technology and Innovation (MESTI) - Ghana
- Ministry of Environment (MINAM) - Peru
- Ministry of Environment - Ecuador
- National Forestry Commission (CONAFOR) - Mexico
- Office of Climate Change

### Implementing partner(s):

- Conservation International (CI)
- Eco Decision
- Forest Trends
- Mario Molina Center (Centro Mario Molina)
- Nature Conservation Research Centre (NCRC)
- Nature Foundation (Fundación Natura)
- Pelangi Indonesia
- Peruvian Society of Environmental Law (SPDA)
- Regional Postgraduate School for Integrated Management and Planning of Forests and Tropical landscapes (ERAIFT)
- Skills and Agricultural Development Services (SADS)
- The Environment and Coffee Forest Forum (ECFF)
- The Institute for Conservation and Sustainable Development of Amazonas (IDESAM)

finance information globally compiling and disseminating the most comprehensive data on REDD+ finance flows in several countries.

- The Wildlife Conservation Society (WCS)

**BMU grant:**

€ 1,872,172

**Duration:**

11/2011 till 07/2016
