

CLIMATE PROTECTION THROUGH SUSTAINABLE BIOENERGY MARKETS IN VIET NAM

As of: February 2021

Vietnam's economy is booming to such an extent that the country's electricity consumption is expected to triple by 2030. The government is consequently expanding the use of biomass waste for electricity and heat generation to achieve the greenhouse gas reduction targets planned in Vietnam's nationally-determined contributions (NDCs). The project supports the development of a sustainable market in this area, advising consultants, project developers and investors on how to draw up feasibility studies, and providing the authorities with an instrument for the approval of biomass energy projects. It teaches staff from financial institutions how to examine and evaluate applications and develops a financing mechanism to favour suitable investments. The project initiates technology partnerships between national and international companies and research and development institutions to develop locally adapted solutions.

PROJECT DATA

Country/Countries:

Vietnam

Implementing organisation:

Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH

Political partner(s):

- Ministry of Industry and Trade (MOIT) - Viet Nam

Implementing partner(s):

- Ministry of Industry and Trade (MOIT) - Viet Nam

BMU grant:

€ 4,000,000

Duration:

04/2019 till 03/2023

Website(s):
