

## CLIMATE-FRIENDLY LOCAL INFRASTRUCTURE

As of: October 2021

The aim of the project was to use loan finance to promote exemplary, prioritised investment to improve energy efficiency in the public sector at municipal and regional level. The selected regional governments should have been assisted in specifying, implementing, refining and monitoring the impacts of regional energy efficiency programmes. Grant funding would have been deployed to finance the consultancy services of international experts and disseminate findings to further regions.

### State of implementation/results

- With regard to financial support, the opportunities for international development banks in Russia are limited since 2014 due to the political situation. As a result, activities under this project have not continued until the end of the project. The project expired at the end of 2017.

## PROJECT DATA

### Country/Countries:

Russische Föderation

### Implementing organisation:

KfW Entwicklungsbank

### BMU grant:

€ 103,381.40

### Duration:

12/2013 till 12/2017
