

INTEGRATION OF GENDER ASPECTS INTO CLIMATE CHANGE ADAPTATION AND LOW-CARBON DEVELOPMENT

As of: February 2021

The project was working to mainstream the gender dimension in climate change adaptation and low-carbon development (LCD) measures in developing countries and in national and international climate policy. It provided training for representatives of community-based and non-governmental organisations and government employees on gender-sensitive adaptation and LCD measures, and supported this work with corresponding information and training materials. In addition, the project developed indicators and methodologies for strengthening and monitoring gender-sensitive adaptation measures and formulates proposals for political strategies.

State of implementation/results

- Project completed
- Campaign launched to raise public awareness of gender issues and climate change; posters developed and widely distributed in Bangladesh and Pacific Island States; issue has received newspaper coverage
- Expert advice provided to governments: gender analysis of the national climate change strategy and action plan of Bangladesh carried out; gender dimension integrated into national policy processes in the Republic of Marshall Islands, Tuvalu and Bangladesh.
- Training courses developed on gender-sensitive adaptation and reduction of emissions; educational materials produced and trainers trained
- Gender issues raised at international climate negotiation conferences (COPs) through official submissions and organization of high-level side events. Since 2012 the COPs are regularly working on gender equality (e.g. the gender decision at COP 17 in Doha)
- Implementation of pilot projects with government representatives, NGOs, local communities, women and youth. The pilot projects focused on
