

RAINFOREST CONSERVATION AND SUPPORT FOR THE INDIGENOUS POPULATION IN THE AMAZON BASIN

As of: October 2021

The project's objective was to develop a suitable methodology for REDD+ based on a forest conservation project in the buffer zones around Peru's Manú National Park. In addition to preserving the rainforest and supporting indigenous peoples in the Peruvian Amazon, these efforts served as a contribution to the international REDD+ debate within the scope of the Framework Convention on Climate Change (IPCC). The project should be further developed by way of external REDD+ validation and preparation of a long-term financing plan.

State of implementation/results

- Project completed
- Evaluation of the international REDD policy with reference to Peru
- Evaluation of the national REDD process in Peru
- Development of a REDD methodology for project region in Peru
- Development of a REDD project
- Establishment of recommendation for the national REDD strategy in Peru

PROJECT DATA

Country/Countries:

Peru

Implementing organisation:

GFA ENVEST - Competence Center for
Climate and Energy

Political partner(s):

- Ministry of Environment (MINAM) - Peru

Implementing partner(s):

- Deutsche Welthungerhilfe e.V.
- Organization for Sustainable Rural
Development (DRIS) - Peru

BMU grant:

€ 112,974.53

Duration:

10/2008 till 12/2009
