

Since 2008, the IKI of the Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (BMU) has been financing climate and biodiversity projects in developing and newly industrialising countries, as well as in countries in transition. The IKI is a key element of Germany's climate financing and the funding commitments in the framework of the Conventions on Climate (UNFCCC) and Biological Diversity (CBD).

The IKI Portfolio

Since its establishment, the IKI has launched more than 600 climate and biodiversity projects. The total project volume from 2008 to the end of 2017 amounts to 2.7 billion euros. The resources for international climate and biodiversity activities have grown steadily since the programme was launched.

Funding volume according to funding area in 2008–2017, in million euros

This publication is part of the public relations work of the Federal Ministry for the Environment, Nature Conservation and Nuclear Safety. It is distributed free of charge and is not intended for sale. Printed on recycled paper.

Achieving goals together

10 Years of the Federal Environment
Ministry's International Climate Initiative

Protected habitats

Climate smart cities

The four IKI funding areas:

Mitigating greenhouse gas emissions

The IKI supports its partner countries in implementing their Nationally Determined Contributions (NDCs) and developing economic structures that avoid greenhouse gas emissions. This includes using renewable energies, increasing energy efficiency and reducing extremely climate-damaging fluorinated greenhouse gases (F-gases) as well as sustainable mobility and city planning.

Adapting to the impacts of climate change

This support focuses on Ecosystem-based Adaptation (EbA) and climate-related risk management instruments, such as innovative insurance schemes, as well as the development and implementation of National Adaptation Planning (NAP) and adaptation components of NDCs.

Conserving natural carbon sinks / REDD+

The IKI supports partner countries in the practical implementation of the international mechanism for reducing emissions from deforestation and forest degradation in developing countries (REDD+) as well as projects to support the approach of forest and landscape restoration (FLR) as part of the Bonn Challenge.

Conserving biological diversity

This concerns implementation of the targets of the Strategic Plan for Biodiversity 2011-2020 (Aichi Targets) of the international Convention on Biological Diversity. IKI projects directly implement measures for the conservation, restoration and sustainable use of ecosystems and critical habitats. They provide particular support in developing and implementing national biodiversity strategies and action plans (NBSAPs).

INTERNATIONAL CLIMATE AND BIODIVERSITY ACTION

Approach and impact of the IKI

Low carbon mobility

Increased resilience

Healthy ecosystems

Sustainable forests

Clean energy

Restored landscapes
