How can charcoal production become sustainable?

Ghana's forest areas are declining by around 2% every year. A large part of the logges wood is used as firewood and for charcoal. In its national REDD+ strategy, Ghana has identified the improvement of wood energy production and its use as a key factor. However, measures to achieve this have not yet attained their potential – and there is a risk that the destruction of forests will continue, despite legislation that protects them. GIZ together with the IKI project's partners aim to develop best practices for sustainable and efficient charcoal production.
